ENVIRONMENTAL POLICY

At Swede-Wheel AB & Hilfa Sweden AB, we are committed to reducing the environmental impact of our operations through continuous improvement and sustainable practices. We aim to integrate environmental responsibility into every aspect of our business, where legal and regulatory demands are minimum requirements.

Makes it Easier
We shall prioritize simplicity and clarity when embedding environmental sustainability into all operations, creating ease for both internal and external customers while ensuring a responsible and forward-looking approach to business.

We achieve this by adhering to the following principles:

- Identify, monitor, evaluate and address our environmental aspects.
- Continuously improving our environmental performance through innovation and sustainable solutions.
- Educating and empowering our employees to adopt environmentally responsible behaviours.
- Striving to prevent pollution and reduce the waste of natural resources.
- Assessing a life cycle perspective in the development of our products, to ensure conscious decisions regarding materials, processes, and recyclability.
- Avoiding the use of hazardous chemicals and substances in our operations and supply chain wherever economically and technically feasible.
- Lowering greenhouse gas emissions by increasing the use of renewable and fossil-free energy sources.
- Minimizing energy consumption across all areas of our business to enhance efficiency.
